List of Figures

1 Introduction

When writing Dr, use Dr. Lowe (with a `.\`) to prevent excess space after the period. Also, put a `~` in you don't want a line to break between the two words.

Start new lines when you reach the end of the editor window...don't just keep writing or you will have a paragraph that spans multiple lines, making it harder to edit when using a different editor.

Look at the other folders for example of including figures and bibliography.

2 Some sample environments

Using `itemize`:

- This
- That

- subitem
- another
- end of list

Using `enumerate`:

1. This
2. That
 - subitem
 - another
3. end of list

3 Conclusion
